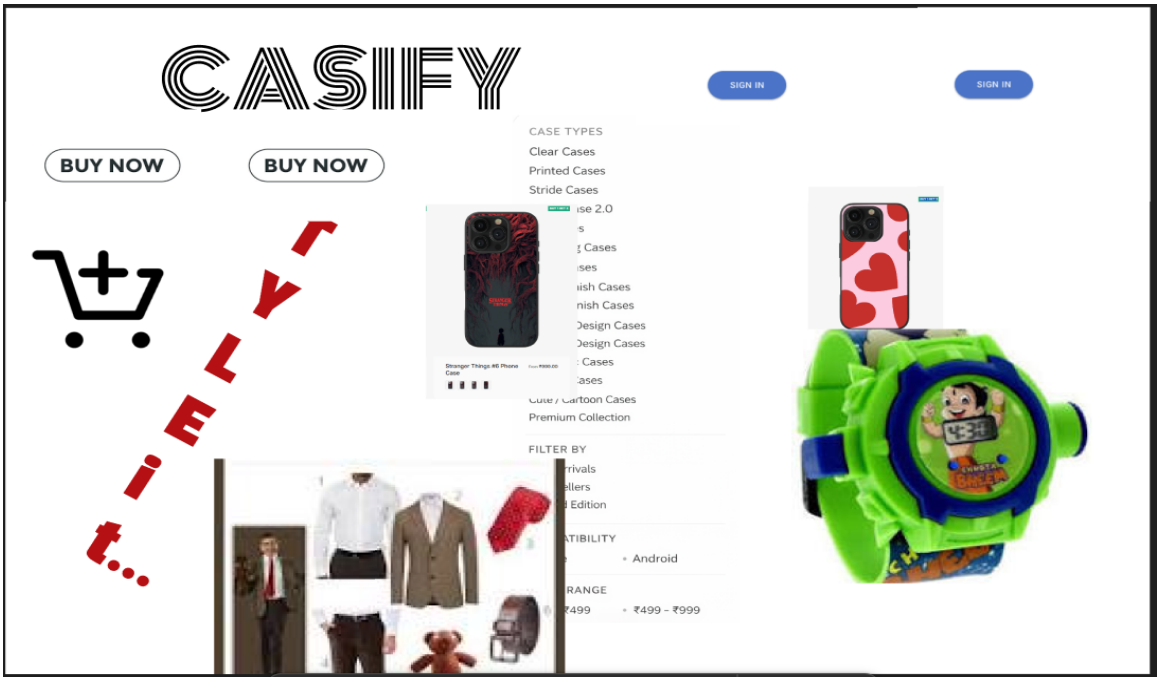
UID EXPERIMENT 1:

GOOD DESIGN vs BAD DESIGN

SHANTHOSH SIVAN.E 240701488

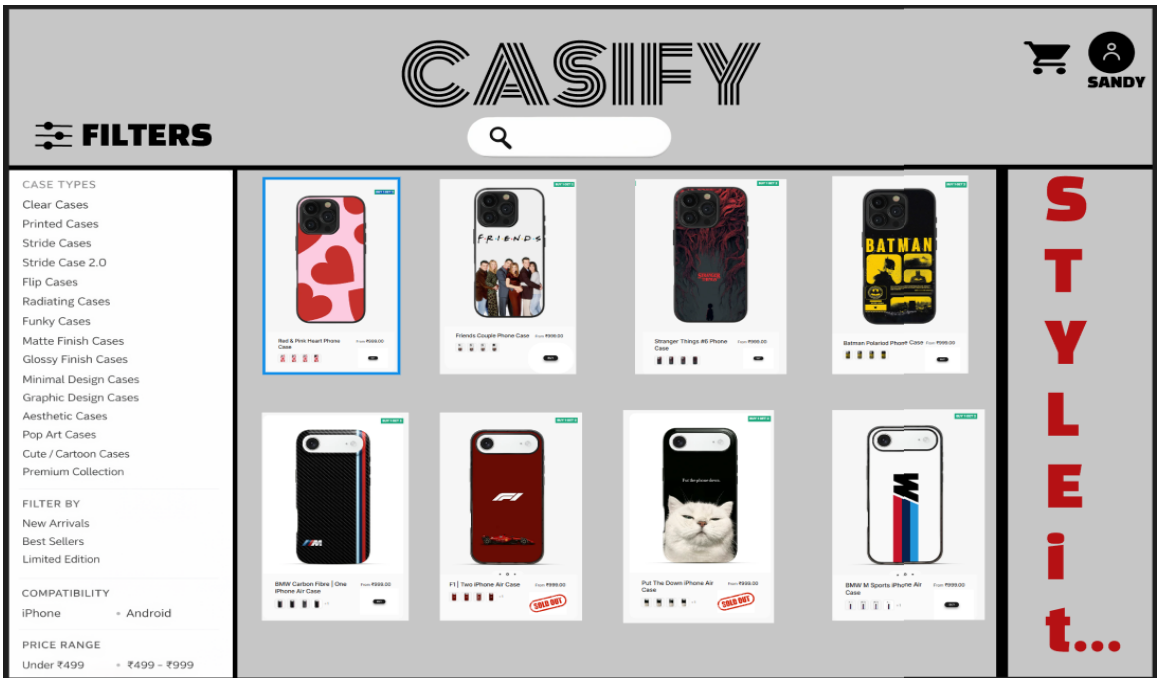
BAD DESIGN :



Why is this a bad design?

- It looks cluttered and confusing – Multiple unrelated images overlap each other, creating visual chaos.
- Poor visual hierarchy – There is no clear focal point guiding the user's attention.
- Lack of alignment – Elements are randomly placed without consistent spacing.
- Inconsistent typography – Different font styles and sizes reduce professionalism.
- Poor color balance – Heavy red background combined with floating elements makes it visually overwhelming.
- Distracting components – Large watch image and floating graphics distract from main content.
- Weak navigation structure – No clear navigation bar or product categorization.
- Low usability – Important actions like 'Buy Now' are not clearly emphasized.
- No proper spacing – Overlapping elements reduce readability.
- Unclear branding focus – Too many decorative elements reduce brand identity clarity.
- Cognitive overload – Users must think too much to understand what the page is about.
- Poor user flow – There is no structured left-to-right or top-to-bottom reading pattern.

GOOD DESIGN :



Why is this a good design?

- Clean and organized layout – Products are arranged in a structured grid system.
- Clear navigation – Filters and search bar are placed logically for easy access.
- Consistent design – Product cards follow uniform styling and spacing.
- Readable typography – Fonts are simple and easy to understand.
- Balanced color usage – Neutral background with limited accent colors improves readability.
- Strong visual hierarchy – The brand name, search bar, and product sections are clearly defined.
- Effective filtering system – Sidebar filters allow users to refine search easily.
- Clear product information – Each product card includes price, name, and status.
- Professional appearance – Minimal design increases trustworthiness.
- Proper spacing and alignment – White space improves clarity and comfort.
- User-centered layout – Actions like selecting products are intuitive.
- Logical structure – Users can easily scan products from top to bottom.
